

## REMANUFACTURED Valves? Don't Experience the High Cost of Saving Money!

We are often asked our thoughts on using remanufactured, repurposed, rebuilt and exchange program valves as a cost savings measure.

Our answer is simple...

***Why risk it, especially when these assets protect the safety of your plant & employees?***

### Have you considered REMAN Valves:

- Often come from salvaged valves and scrap auctions
- Frequently have no record of where they were previously serviced or used
- May not be hydro or integrity tested
- May be built with used critical parts
- Might have limited service capabilities
- Create risks to your company insurance rating, FM Standing, and most importantly, safety records
- Might lead to unwanted attention if one fails
- Are often older models and you might replace your newer model with an older one

**Let our experts help you decide if it's worth the risk.**

## Mechanical Services

### Pressure Relief Valve Services

ASME Certified OEM assembler and National Board Certified test and repair

### Valve and Actuator Repair Services - *At your site or in our facility*

Pressure relief valves & tank vent repair services | Electric, pneumatic & hydraulic actuators | Isolation valves, gate, globe, ball, knife gate, butterfly, plug and check
