3-Day Machinery Lubrication Training

Our intensive, 3-day educational course is an International Council for Machinery Lubrication (ICML)-based 3-day class designed to give you the theory and practical tools you'll need to transform your lubrication program. By using "how-to" guides, you'll complete the course knowing why and how key changes should be implemented in your organization.

Plus, we offer an ICML certification testing opportunity and our 100% money back guarantee.

The course will help you understand:

- How lubricants work, how to create machine lubricant specifications and how to manage their condition
- How to select optimum greases
- How to design a world-class lubricant storage and handling system
- How to modify equipment for lubrication, inspection, oil analysis and contamination control
- How to identify gaps in your program and create a game plan for your next steps

In the training you will focus on:

DAY 1:

- Role of lubrication in machine reliability
- Lubrication theory and fundamentals
- Lubricates failure modes
- Lubricating oil application methods

DAY 2:

- Grease application methods
- Lubricant selection and lubrication considerations
- Lubricant contamination control

DAY 3:

- Storage and handling of lubricants
- Used oil analysis
- Oil sampling methods
- Equipment modifications
- Lubrication program gap analysis
